

NCRF Journeys of Hope:

Stacey's Story

Fellow student researchers, Kerry Reed and Jason Sprowl.

Stacey Hembruff is passionate about cancer research. The work undertaken by graduate students at the Regional Cancer Program is amazing. The Northern Cancer Research Foundation invests in the future of Northeastern Ontario by providing bursaries to students registered in an Ontario University in a Master's or Ph.D. program relevant to cancer research and on placement in the Regional Cancer Program.

The **Northern Cancer Research Foundation** [NCRF] raises needed funds in support of the Regional Cancer Program which provides leading-edge cancer research and progressive patient care here in the North. Our much needed funds are generously donated by people just like you through personal giving, In Memoriams and the fundraising efforts of many northern volunteer organizations. Through your donations, NCRF helps fund the purchase of vital equipment for research and the expansion of patient services throughout the North. Every donation NCRF receives stays here in the North to benefit the people of the North.

Dedication to Research

Stacey is working with Kerry Reed in a sterile environment called the "flow hood". This provides a DNA free environment to conduct scientific experiments. Stacey and Kerry are currently investigating the causes of chemotherapy resistance in breast cancer.
